

the pass *v.01*

A line check for a hospitality operator's Xero books.

WHY

Hospitality runs on Xero.

Owners see a fraction of what their data knows.

The accountant files. The reports go unread.

THE IDEA

Your data holds the answers.
No one is watching it. Now something is.

Constant oversight of your books — an LLM you can talk to about the patterns in your business. Yours first. Your accountant's if you want.

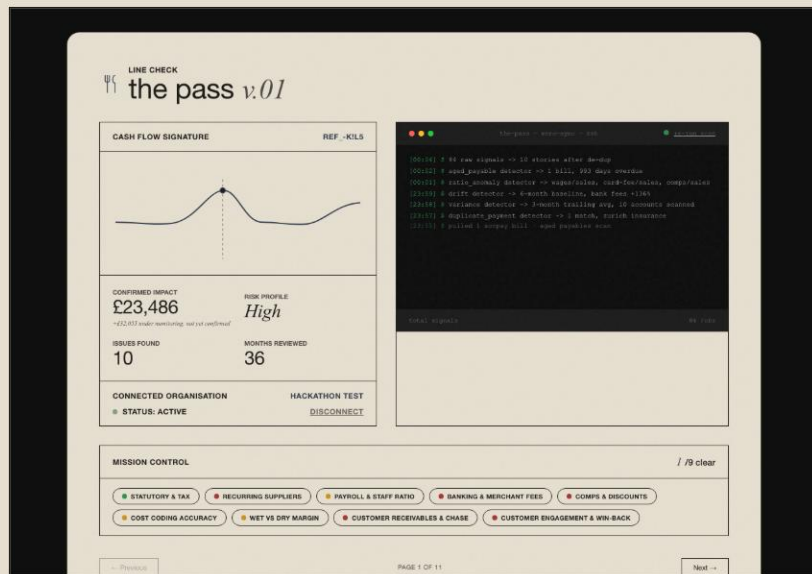

THE MAGIC

An accountant checks what you ask.
This checks everything.

Wages creeping ahead of sales. Fees doubling, slowly. A big regular gone quiet.

Every account, every ratio, three years deep — on every scan.

THE PRODUCT

Mission control. Each part of the business, checked, with a status.

THE PASS

LIVE

Watch it run.

```
the-pass - xero-sync - zsh
```

```
$ python3 detect.py
```

```
Pulled 477 bank transactions from Xero
```

```
duplicate_payment detector → 1 match, zurich insurance
```

```
variance detector → 3-month trailing avg, 10 accounts scanned
```

```
drift detector → 6-month baseline, bank fees +129%
```

```
ratio_anomaly detector → wages/sales, card-fee/sales, comps/sales
```

```
aged receivables → 2 overdue · customer churn → 1 gone quiet
```

```
84 findings written to findings.json
```

Live Xero, from scratch — then ask it anything.

WHAT IT CAUGHT

HIGH	Zurich Insurance, paid twice — £1,800 on 10 March, again on the 13th.
RATIO	Wages hit 33% of sales. Usual: 26%. The pound amounts looked fine.
DRIFT	Bank fees crept £127 to £291 in six months. No single month rang an alarm.
CHURN	Borough Films: six bookings near £3,000 each — then 418 days of silence.

84 findings · 36 months · one small tavern

PROOF, NOT PROMISES

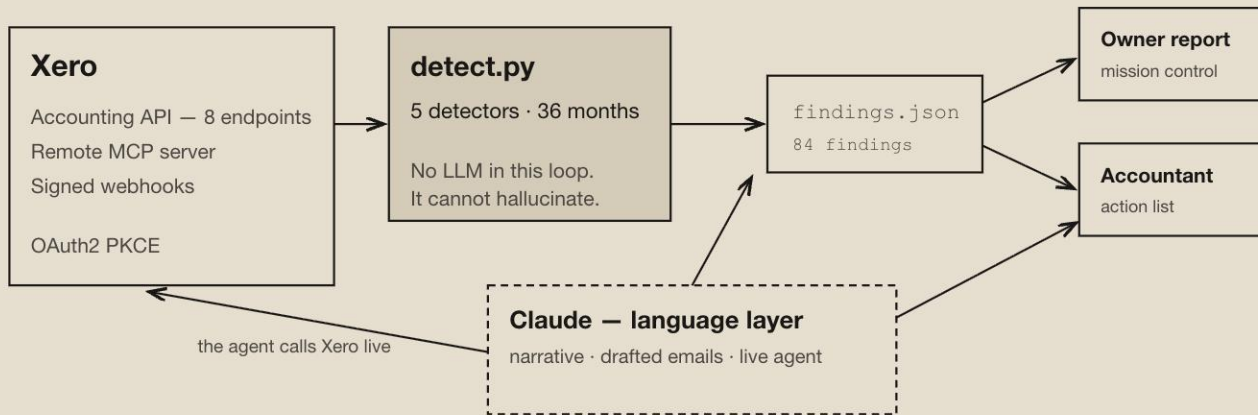

Unreconciled			
To	Date	Reference	Total
Zurich Insurance	13 Mar 2026		1,800.00
Item Code	Description	Quantity	Unit Price
	Quarterly insurance premium	1.00	1,800.00

The double payment, in Xero itself. Every transaction here came through the API.

The chase email, already written.

WHAT WE BUILT

WHY TRUST IT

Deterministic where money demands accuracy.

AI where language beats arithmetic.

It cannot hallucinate a finding.

Accounting API — 8 endpoints

Organisation, Accounts, Contacts, BankTransactions,
Invoices, P&L, Aged Payables, Aged Receivables

OAuth2 PKCE

Refresh + RFC 7009 revocation

Remote MCP Server

Full handshake against builders.xero.com, live

Signed webhooks

HMAC-SHA256, tested — tampered payloads rejected

WHERE IT GROWS

Webhooks — *catch it the day it happens.*

Multi-org — *one owner, ten sites, one report.*

Payments data — *act on cash flow, not just see it.*

Real oversight.
More value from Xero.
More profit.
